

Case History

Tote & Parcel Handling

UK Mail is one the UK's leading integrated postal operators. Monk Conveyors have installed roller track conveyor systems at two of their sites, feeding tote bins along a sorting station.

The plastic totes are 300 x 400mm weighing 10kg. The roller track system included side chain transfers, blade stops to separate totes and sensors with PLC software control.

A control system controlled the flow of work through the system.

The project included full mechanical and electrical installations, followed by training and handover to the customer.
