

Case History

Warehouse & Sortation

MONK Conveyors pallet systems provide the in-plant transport links between production, warehouse, order picking and despatch. All too often pallets are stored in racks, stacked up and then transported by forklift truck. This can create capacity shortfalls, damage to pallets and products.

The system shown handles pallets within a packing and filling area. It included side chain transfers to lift and route product to different areas.

MONK Conveyors pallet conveyors:

- Modular Painted Steel Design
- Up to 4500kg conveyed with one drive
- Robust construction with formed steel frame profiles
- Smooth and gentle transportation – minimum backlash, low maintenance.
- Side Chain transfers using triple stand chains
- Roller and Chain rotating turntables
