

Introduction to

MONK

What We Do

MONK Conveyors are a leading conveyor and automation system integrator. We specialise in supplying conveyor and automation equipment which is designed to **save space, improve productivity and reduce your operational costs.**

We can offer expert advice on standard conveyors through to more complex conveyor systems which automatically feed and route your products or materials to operators and machines **using the latest technology.**

Supporting the Whole Process

Our expert team will guide and support you through the whole process from initial concepts ideas through to the final fully installed working solution. **Introducing conveyors and automation can be simpler and take less of your time with MONK.**

Helping to Improve

MONK provides a lot of advice as part of our conveyor and automation solutions, helping customers design **efficient, future-proof production line layouts.**

Our experienced engineering team will work closely with you to understand your products, processes and operational objectives, providing **practical advice on workflow, throughput and system integration from the earliest stages of a project.**

Using detailed 3D CAD layouts and our proven automation expertise, we will optimise floor space, reduce bottlenecks and ensure effective integration with your existing equipment.

This approach ensures every conveyor system we deliver is tailored to you, being cost-effective and aligning with your long-term production goals. Plus, **we continue to support you after installation with aftersales support,** spares and servicing.

Delivering 'Turn-Key' Solutions

- Initial design concept and idea discussions
- Project planning with target milestones
- Factory build and preparation in our facility
- In-house control panel design and build
- In-house software development for PLC & PC systems
- Shipping and delivery to your site
- Mechanical and electrical installation work
- Handover and full training

Integration With Your Site

MONK's software systems use our in-house control panels and software along with intuitive operator touch screens. We install barcode scanners and RFID readers along with our ability to communicate with your Warehouse Management System (WMS) and product databases. **Our installation and service team support our customers within the UK and internationally.**

1 to 2 Year Warranty

Packing Lines

Reduce manual handling and improve efficiency by allowing staff to focus on packing

Warehouse Systems

Conveyor systems which can reduce manpower and increase productivity

Belt and Roller Conveyors

Wide range of conveyors available to move a wide range of product types

Inter-Floor

Cost effective method for transporting goods up and down between floors

Product Lifts

Automatically transport small to medium sized goods vertically between multiple floor levels

Spiral Conveyors

High throughput method of moving goods between floor levels or over walkways

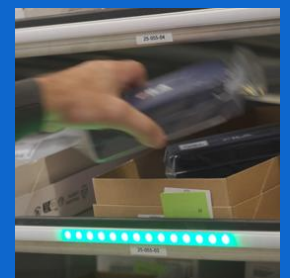

Sortation Systems

Automatically separate and sort products into different routes, bags, totes or pallets

Pick to Light

Light up a bin or shelf locations to quickly and efficiently show staff where to pick or put products

Product Scanning

Barcode and RFID scanning software and setup to route and sort product around your site

Control Systems

Control how a conveyor system operates and provide information to staff and maintenance
